The worlds best Glass Reinforced Injection Moulded Propellers

Amazing value / top performing BOLLY PROP for all modellers. Computer designed for optimum performance.
Manufactured from a quality polymer utilising 40% glass fibre and our special fibre orientation technology.
The extra 1/2" diameter optimizes our efficient high aspect ratio blade design and pitch distribution.

1. Excellent in air Performance : Outperforming all other props, especially in vertical.
2. High Strength : Our fibre orientation technology makes a very strong propeller.
3. Good RPM : Excellent results compared to other similar sized props.
4. Smoothness of operation : Better than all other props tested.
5. Quieter : Our props produce better (lower) noise readings.
6. Well balanced : Perfect balance almost every time.

PRODUCT INFORMATION SHEET No. 8

We continue to receive reports from modellers throughout the World, who tell us the Bolly Clubman Series propellers the best props on the market. The combination of durability, performance, 'out of the bag' balance and economical price makes the Clubman Series the best available.

We believed we have achieved a technology breakthrough in propeller design, and we continue confirm it. Our design philosophy sure works. The design, tooling and production are fully computer generated / controlled for optimum accuracy and performance ... Customers can be certain of consistency in design and performance.

Manufactured from a quality polymer utilising 40% glass fibre and our special fibre orientation technology. The glass reinforced nylon material used is stiffer and stronger than most, whilst less prone to breakage than moulded props made with a higher glass content. We believe it is the perfect compromise of durability and performance.

Bolly Clubman Series propellers are available in a range of 1/2" sizes to suit the engines of today. The extra diameter gives a discernible difference to thrust, and the efficient blades will deliver top performance at good rpm and very low noise levels.

Clubman Series props are produced in an attractive Fawn colour. Not only is it a different, 'wood' like colour, it also makes the Clubman Series props stand out from the pack.
